

Kim Announces Go-To-Market Partnership with Ascertus to Offer Cutting-Edge Document Automation and Workflow Solutions

London, May 10, 2023: Kim (www.kimdocument.com), the no-code, SaaS, patent-protected document generation, assembly, and workflow automation platform, today announced that Ascertus (www.ascertus.com), a leading provider of document and information lifecycle management solutions, has become a reseller partner.

Ascertus has an impressive track record of delivering cutting-edge solutions to clients in law firms, accounting firms and corporate legal departments across all sectors. By partnering with Kim, Ascertus, who is one of iManage's most successful partners in Europe, will be able to offer its clients access to innovative document automation, intelligent data capture and smart integrations that streamline document creation and management processes, increase efficiency and reduce the risk of errors.

Commenting on the partnership, **Roy Russell, CEO** of Ascertus Limited said, "Kim is a great addition to our portfolio and a natural fit. As businesses look for ways to increase efficiency and streamline their operations across dispersed environments, document automation has become an essential tool. Kim's software is at the forefront of this technology, and we are excited to offer our clients access to this powerful tool."

"We are delighted to partner with Ascertus." Said **Karl Chapman, CEO** at Kim. "From the first meeting, it was clear that we viewed market trends in the same way. Our document automation software is designed to streamline document creation and management processes, and in Ascertus we have a partner who can help new clients deploy Kim quickly and maximize their ROI. The iManage integrations that we are working on will add further value to this partnership"

Kim assists knowledge workers around the globe to automate and generate documents, capture data and use that data to generate other documents or populate other systems. The solution is available from a browser, MS Teams and other systems and is quick to implement, making it a valuable tool for businesses looking to start or supercharge their document automation program.

About Kim

Kim is a no-code, SaaS, patent-protected document generation, assembly and workflow automation tool. Kim's Enterprise solution is proven with Fortune 500 organizations in legal, compliance, contract management, company secretarial, office productivity and other functions.

Kim's Business tier allows any function or role in small, medium or large organizations to take their existing Word documents and automate them plus turn them into web applications that can be shared internally and/or externally. It automates letters, forms, records, checklists and contracts in minutes, with no training, integrates seamlessly with MS Teams, and is accessible from any browser.

Kim has two patents. When a DOCX template is uploaded into the Kim software it gains additional knowledge by learning the structural composition of each template and it can interface with any authenticated and authorized client over HTTPS with an intelligent understanding of the correctness of the data being supplied. This enables the automatic extraction of tags from the multiple sample documents, the storing of the tags in a data schema separate from the documents, automatically generating structural schemes from the tags, automatically creating document templates from the sample documents and processing the document templates to create unique identifiers (see 'Patent Headlines' section and the Kim patent: <https://patents.justia.com/patent/10817662>).
